Zwaluw® FP Wall Outlet
Fire resistant inlay for electric wall outlets

Product Description
The FP Wall Outlet is developed to make electric wall outlets in (composite) walls fire resistant, simply by placing them in the socket.

Benefits
- Fire retardant up to 2 hours
- Applicable for existing and new sockets
- Can be used in massive and composite walls

Applications
In case of fire the switching material will melt, followed by the socket. This offers an opening for the fire to spread inside the wall or to the next compartment. When the wall socket is equipped with an FP Wall Outlet, it will expand in case of fire, closing the opening for smoke and fire, preserving the fire retardant property of the wall. The FP Wall outlet is easy to install and can be applied in existing and new sockets.

Directions of Use
Remove the lid, or switching material of the wall socket. Eventually remove the inside of the wall socket. Remove wiring and connection material. Place the FP Wall Outlet to the back of the socket box. Re-install wiring, lid and or switching material.
